CONTENTS:
This directory file contains flash-ROM utilities for
the DTL-H2700.

Rewrites Firmware

ROM image is written in the DTL-H2700

Syntax: flash <I/O address>

The <I/O address> specifies the I/O address set in the DTL-H2700.

Example:

DOS> cd \pssn\flash27
DOS> flash 1340

Note:

- When operation is abnormal and the DOS prompt cannot be returned to, press F10 F2.
- Make sure that DEXBIOS is in the 'Remove' state as it is executed.

Switches PAL/NTSC screen modes

When turning on the system, the DTL-H2700 starts up in NTSC screen mode.
reset27.exe switches PAL screen mode.
There is no need to set it again later on.

Syntax: reset27 [-p|-n] [-a<I/O address>]

-n Sets the screen mode to NTSC
-p Sets the screen mode to PAL

If specification is omitted, the previous mode is maintained.

The -a<I/O address> specifies the I/O address set in the DTL-H2700.
When the I/O address is not set, the address set in the PC environment
variable DEX2000 is used.

Example

DOS> reset27 -p -a0x1340

Example

DOS> set DEX2000=0x1340
DOS> reset27 -p
