

Date: July 1998

Directory: \PSX\UTILITY

The contents of this directory have changed since the last CD release. (2.1)

This directory contains the following:

* - marks directories that have moved.

- * CDEXEC- Contains source to the "cdexec.cpe" file
 which is used to boot programs directly from
 the CD.
 * - Moved to: \psx\sample\module
- CCS2POS - A utility for that takes a .CCS file (as saved
 from CD-Gen software) as input, and outputs a
 header file, with all the files defined as macros
 and their values having their absolute sector
 address on the CD (contributed by Ben Fawcett,
 formerly of SCEE).
- * MENU - Contains a utility for running the precompiled
 samples on the Programmer Tools CD.
 * - Moved to: \psx\sample\module
- PCDOWN - Contains a utility for allowing your computer
 to capture the output of the serial port of a
 blue debugging station.
- * SOUND - This Macintosh .hqx file contains version 1.01
 of the Sound Library to provide you the
 functionality of aiff2vag and raw2xa
 in your own Macintosh programs.
 * - Moved to: \psxsound\mac\
