=====  
CONTENTS OVERVIEW:

This package contains Libds.lib 4.2.1, and its associated header file, and fixes bugs in Libds.lib version 4.2. A CodeWarrior version will be released in the future, as currently the CodeWarrior compiler experiences problems when compiling with Library 4.2 files. Metrowerks is working on the problem.

=====  
INSTRUCTIONS:

Use PKUNZIP or WinZip to extract the contents of this file into a temporary directory. Then move the .h files into your \psx\include directory, and the .lib files into your \psx\lib files.

Libds.lib version 4.2.1 (Bug-fixed version for version 4.2)

Libds.lib version 4.2.1 will be released. The following malfunctions in libds.lib version 4.2 have been fixed in this version.

[Symptom]

1. When location is obtained with DslGetlocL, values of the 10-minute range(from 10 min. 0 sec. 0 sector to 19 min. 59 sec. 74 sector), the 30-minute range, the 50-minute range, and the 70-minute range on a CD-ROM are not obtained correctly.
2. When data is read with DsRead(), the read operation might be unsuccessful because -1 is repeatedly returned from DsReadSync().

[Remedy]

- 1.The above malfunction has been fixed in the version 4.2.1.
- 2.Error recovery feature has been enhanced in the version 4.2.1.
