

=====

File:

encv_101.hqx

=====

Date:

August 25, 1997

=====

Contents Overview:

This Macintosh .hqx file contains version 1.01 of the Sound Library to provide you the functionality of aiff2vag and raw2xa in your own Macintosh programs:

a2v_68k(A4).lib
a2v_ppc.lib
encvag.h

This is useful if you are interested in writing your own Macintosh utilities for processing sound. We have released it in HQX format on the CD to avoid cross-platform problems. (We develop the CD on the IBM PC).

=====

Instructions:

Use CompactPro or your favorite decompressor to extract the contents of the hqx file on a MACINTOSH. Then double-click on the resulting self-extracting archive. Place the ".h" file in your header directory, and the ".lib" files in your library directory.

=====

Note:

A Windows DLL with the same functionality will be provided in September 1997.
