

PS Tool Manual

File name:

kanjdiv : Extracting data from KANJI font

Date:

July 5, 1995 Version 1.2

Syntax:

kanjdiv [options] input-file

Explanation:

Extracts KANJI data specified in input-file from KANJI font data (non-KANJI, the first level KANJI, the second level KANJI, user-defined characters) and outputs to a file.

Note: Not corresponding to half-size characters and characters for vertical writing.
As for the user-defined characters, only 15x15 font is available.

[options]

-o output-file Specifying the file name to which the extracted KANJI data is output.
kanji.out is default.

-font 11|13|15 Specifying the font of output KANJI data.
Selecting among 11x11, 13x13 and 15x15.
15 is default.

-path font-path Specifying the path name of KANJI font data file.
"..\\fontdata\\" is default.

-v Detail information

Remarks:

KANJI font data is stored in "..\\fontdata\\got1[1,3,5]j[0,1,2]b.h" and in "..\\fontdata\\got15gai.h", and read when kanjdiv boots up .
If the data is stored under other directories, specify the path with -path option.

Example:

kanjdiv -o kanji.out -font 15 test.knj
