

This is an example written by Mike Fulton of SCEA which demonstrates how to use the PCFS on the development boards.

To run on the DTL-H2500 or the DTL-H2000 machines:

1. Open up a DOS-box.
2. Run dexbios.com or h25bios.com in the DOS-box. For example, type

```
c:\ps\pyq\bin\h25bios.com
```

or

```
c:\ps\bin\dexbios /a1340 /i10
```

3. Run mess1.com, the TSR message handler. Type

```
mess1.com
```

in the DOS-box.

4. Run your program -- in this case,

```
run hello.cpe
```

5. Type "testmess" to see the output.
